Details

27 years old

Driver's license

Boat license

First aid certificate

SKILLS

Nodejs JS, TS - 5 years
Professional & personal projects: advanced

VueJS, React - 3 years
Professional & personal projects: advanced

DevOps - 3 years
Professional & personal projects: advanced

Cloud AWS, Google - 4 years
Professional & personal projects: advanced

OOP C#, Java - 3 years
Professional & personal projects: advanced

Python - 3 years
professional projects: good level

PHP - 1 year
professional projects: basics

Agile - 5 years
Professional & personal projects: daily life

Soft skills

Team spirit, flexibility and adaptability, autonomy.
English: professional

Passions

Handball, skiing, hiking, skateboarding, climbing, space, science, new technologies

Profile

As a full-stack, product-oriented engineer, I design develop and deploy modern, scalable web applications, with strong expertise in React, Node.js, PostgreSQL, Docker, and cloud architectures (AWS, serverless). I work extensively on advanced AI integration (agents, MCPs, RAGs), with a pragmatic approach: clean code, maintainable systems, and tangible business value.

Experiences

Fullstack dev, devops, solution architect

Quanthome - Lausanne, Switzerland - October 2024 / Today

Development of a real estate back office for data entry and processing, and a fullstack AI conversational agent for real estate analysis of owner data.

Stack: React, Node.js, PostgreSQL, Docker, authentication, usage tracking, subscription/payment management.

AI: prompt engineering, MCP patterns, RAG, agentic systems, contextualized analyses for finance.

Fullstack dev, devops, solution architect

PropulseLab - Lausanne, Switzerland - January 2023 / October 2024

Design of tools around payments (PSP, refunds, reconciliations, fraud prevention), enabling better reliability of financial flows and a significant reduction in chargebacks.

Development of a configurable link shortener with statistics, improving the efficiency of A/B tests and the exploitation of marketing data.

Creation of an order control system, reducing fraud attempts and securing the purchasing process.

Internal training in the basics of development, facilitating the upskilling of non-technical staff.

Research and Development Engineer

Metafactory - Paris - September 2020 / May 2022

Optimization of a C# .net application, accelerating user navigation and reducing interface response times.

Development of a REST API and a web interface in .NET, separating the front-end from the servers, which improved security, facilitated maintenance and reduced service interruptions.

Education

2020: Engineering degree in computer science from CESI - Aix-en-Pce

Software development & data science

2017: DUT (University Diploma of Technology) - Annecy

Applied physics
